

APPLICATIONS

- Irrigation monitoring and control made easy
- Universal upgrade to any make, model or age of hose reels and travelers, electric and combustion pumps

FEATURES

- Durable hardware, easy installation
- IP67-rated enclosure designed to withstand wet, dirty conditions.
- High-gain external LTE antenna ensures signal in remote locations.
- Simple instructions and online tutorials allow you to install the system in less than an hour.
- The FarmHQ System uses sensors, GPS, cellular connectivity, and an easy-to-use app that lets you monitor and control your equipment from anywhere.

Automatic Shutdown

FarmHQ can automatically shutdown your equipment and notify you in realtime when irrigation is complete, or if something goes wrong with your equipment.

Real-time Monitoring & Control

Know where your mobile systems are in real-time and what they are doing. Plus, you can control them - all from your phone or computer.

Detailed Record Keeping

Stay informed by understanding how much water is being used, where it's being applied, and its potential impact on your yields during every irrigation run.

Easy Reporting

FarmHQ can generate water usage reports for a single water source, or for your entire operation, making regulatory compliance a breeze.
