

APPLICATION

- Suits all types of terrain.
- For properties from 1 to 1000 acres.
- Application up to 24 hour period maximizes absorption with little or no run-off.

FEATURES

- Low capital costs
- Cost flexibility: can be installed initially on a small scale and then expanded as budgets allow.
- New lines able to be added with ease.
- Less investment in underground networks: mainlines can be reduced at the extremities, branch lines reduced in size and no hydrants required.
- Ease of installation, use and shifting
- Shifts can be done quickly with your 4 wheeled drive ATV or available vehicle.
- Minimal time lost during shifts. Each line can be moved in minutes, while they are still operating.
- Low maintenance costs. The only moving parts are the sprinklers, pumps and valves.
- Low energy requirements
- Crops up to 24 inches tall can be irrigated
- Livestock is not affected.
- No storage required. Lines and pods can be left in the paddock or field.
- Simply disconnect and move the lines to the fence when mowing, cultivating or harvesting.
